    adding fourth.txt

commit 440dfd4103dcf420b37818c256919b0337110484

Author: ZeuRizzler <st24.djenaoui@gmail.com>

Date:   Thu Dec 5 21:05:37 2024 +0100

    adding third.txt
```

```
PS C:\Users\ROG FLOW\Documents\learn_git> git config --global
usage: git config [<options>]

Config file location

    --global             use global config file

    --system             use system config file

    --local              use repository config file

    --worktree           use per-worktree config file

    -f, --file <file>    use given config file

    --blob <blob-id>     read config from given blob object

Action

    --get                get value: name [value-pattern]

    --get-all            get all values: key [value-pattern]

    --get-regexp         get values for regexp: name-regex [value-pattern]

    --get-urlmatch       get value specific for the URL: section[.var] URL

    --replace-all        replace all matching variables: name value
[value-pattern]

    --add                add a new variable: name value

    --unset              remove a variable: name [value-pattern]

    --unset-all          remove all matches: name [value-pattern]

    --rename-section     rename section: old-name new-name

    --remove-section     remove a section: name

    -l, --list           list all

    --fixed-value        use string equality when comparing values to
'value-pattern'

    -e, --edit           open an editor

    --get-color          find the color configured: slot [default]

    --get-colorbool      find the color setting: slot [stdout-is-tty]

Type

    -t, --type <type>    value is given this type

    --bool               value is "true" or "false"
```

```
    --int                   value is decimal number

    --bool-or-int           value is --bool or --int

    --bool-or-str           value is --bool or string

    --path                  value is a path (file or directory name)

    --expiry-date           value is an expiry date

Other

    -z, --null              terminate values with NUL byte

    --name-only             show variable names only

    --includes              respect include directives on lookup

    --show-origin           show origin of config (file, standard input,
blob, command line)

    --show-scope            show scope of config (worktree, local, global,
system, command)

    --default <value>       with --get, use default value when missing entry
